DEPARTMENT OF DATA ANALYSIS

IT TRAINING PROJECT

INTRODUCTION

- Sales data contains valuable information about business performance.
- Analyzing sales data helps identify trends, top-selling products revenue patterns.
- This project uses data analytics tools to examine Nigerian e-commerce sales data.
- The goal is to generate useful insights that can support better business decisions.

AIM AND OBJECTIVES

Aim:

To analyze sales data and identify useful insights that can help improve business performance and revenue.

Objectives:

- Clean and prepare the sales dataset using Microsoft Excel.
- Store and analyze the data using SQL Server.
- Identify sales trends, top products and vendor performance.
- Create interactive visual reports using Power BI
- Provide recommendations based on the analysis.

DATASET AND TOOLS USED

Dataset:

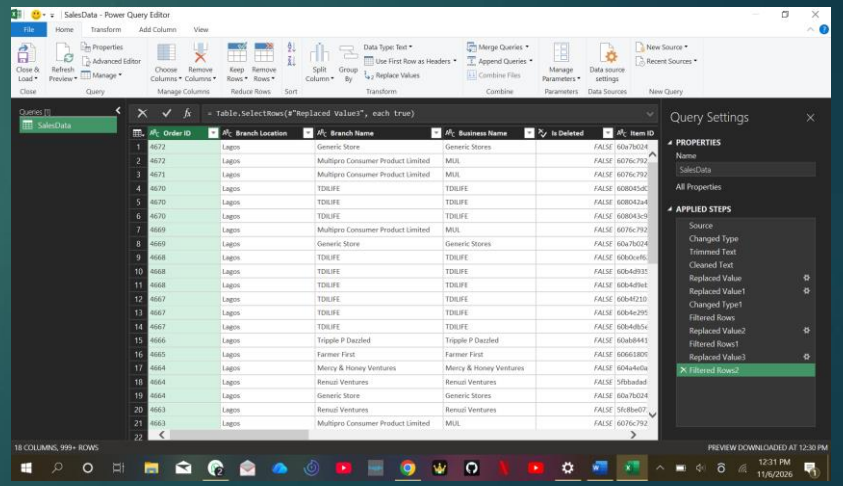

- Source: Kaggle – Nigerian E-Commerce Dataset
- Period covered: February – May 2021
- Records imported: 3,928
- Focus: Delivered sales transactions

Tools Used:

- Microsoft Excel: Data cleaning and preparation.
- SQL Server Management Studio (SSMS): Database storage and analysis.
- Power BI: Data visualization and dashboard development.

DATA CLEANING AND PREPARATION

- Imported the Nigerian E-Commerce dataset into Microsoft Excel.
- Used Power Query to clean and transform the dataset.
- Handled missing values and corrected data inconsistencies.
- Checked important columns such as Quantity, Item Name and Total Price.
- Focused the analysis on delivered transactions.
- Saved the cleaned dataset for SQL Server import.

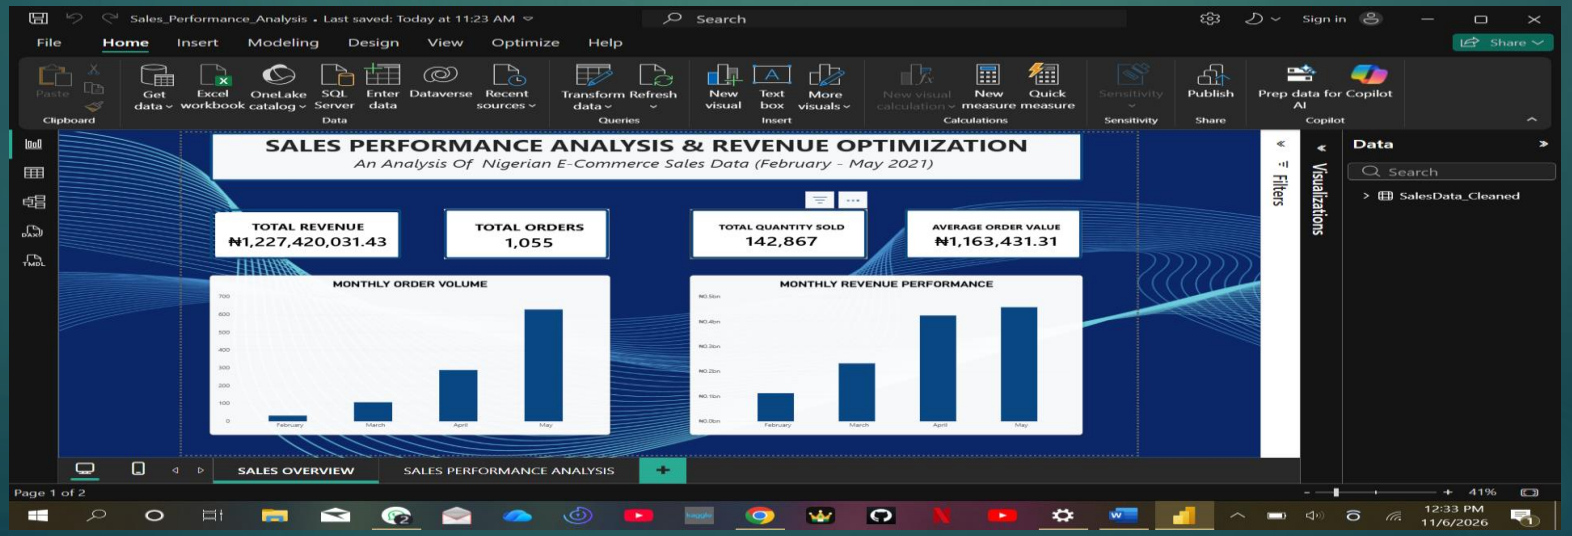

DATABASE MANAGEMENT AND SQL ANALYSIS

- Created a database named SalesPerformanceDB.
- Imported the cleaned dataset into SQL Server.
- Stored 3,928 records in the SalesData_Cleaned table.
- **Used SQL queries to analyse:**
- Total revenue and quantity sold.
- Monthly sales performance.
- Top-performing products.
- Vendor and branch performance.

SALES PERFORMANCE DASHBOARD

- Connected Power BI to the SQL Server database.
- Created four KPI cards to display key performance indicators.
- Developed eight visualizations to analyse sales performance.
- Presented monthly revenue and order trends.
- Compared product, vendor, branch and regional performance.

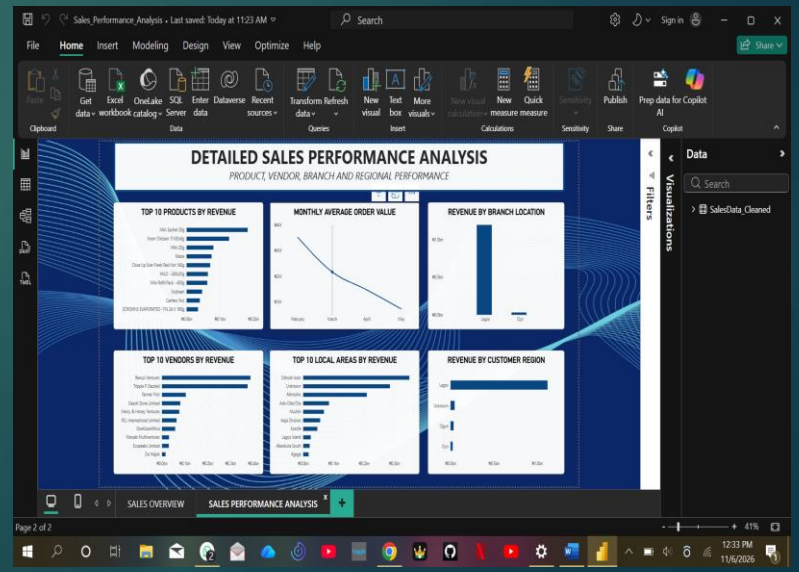

KEY FINDINGS AND RECOMMENDATIONS

Key Findings:

- May recorded the highest monthly revenue.
- Milo Sachet 20g was the top product by revenue.
- Renuzi Ventures recorded the highest vendor revenue.
- Lagos generated the highest branch revenue.

Recommendations:

- Maintain stock levels for high-performing products.
- Monitor vendor performance regularly.
- Investigate areas with missing location information.
- Use sales reports to support business decisions.

CONCLUSION

- The project demonstrated how Excel, SQL Server and Power BI can be used together to analyse sales data and generate useful business insights.
